# ORION MODULAR RANGE ASSEMBLY

Make your own socket and switch plates to fit your needs.

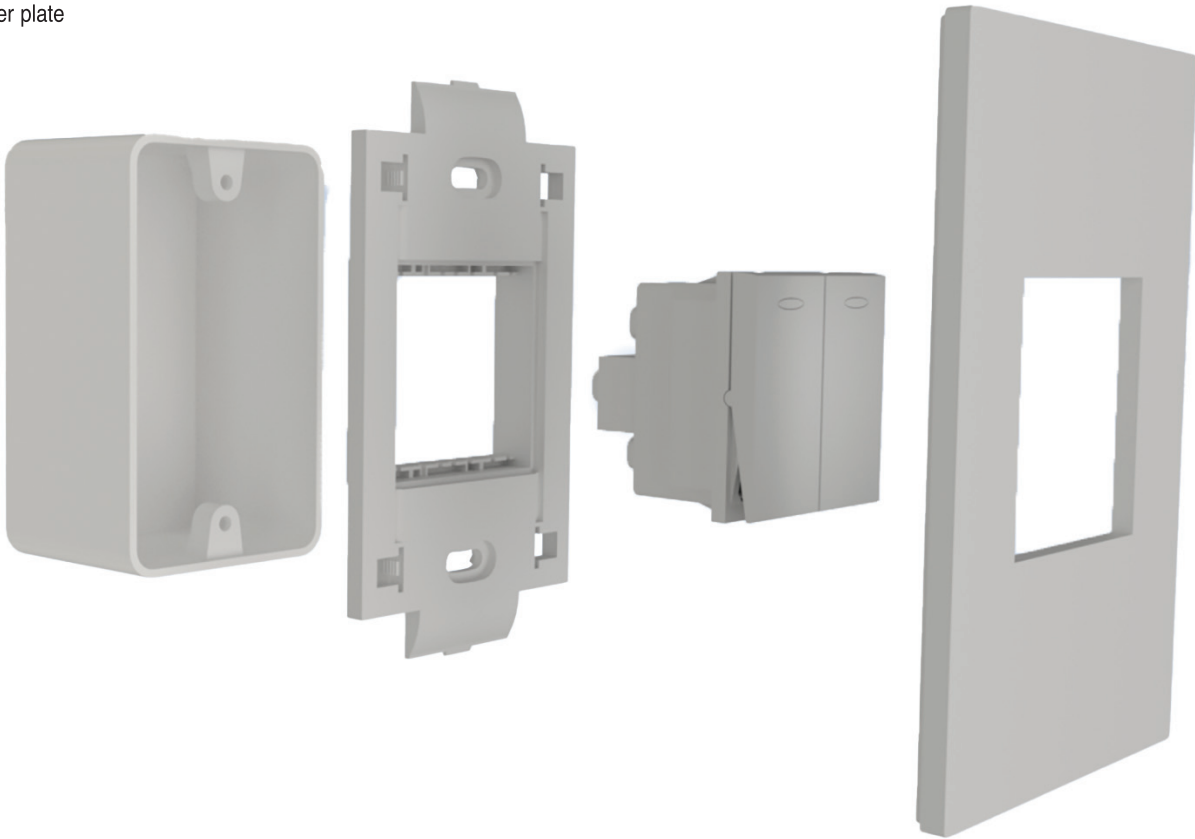

Choose the plate size and then add the modules to fill the frame size.

Note: A 2 Gang frame can have two single size (thin) modules and a 4 Gang plate can have four single size (thin) modules. A double module (the size of two singles) is easy to spot as it has a square shape - if you choose a double module, you obviously will have fewer single modules e.g. a 4 Gang plate can have one double and two single modules (instead of the normal four singles).

Choose your module colour to match the plate/trim, a modular plate with a white trim usually has white modules in it.

**Order of assembly:**

1. Choose wall box
2. Match Frame to existing wall box
3. Configure module layout
4. Add cover plate

## COLOUR CHART
